REQUIREMENTS MANAGEMENT PLAN

Project Title:	Mary's Consulting – New Company Website	Date Prepared:	May 7, 2026

Collection

Requirements will be elicited using interviews with the sponsor (Mary) and key internal stakeholders (Marketing Lead, Sales Lead, IT/Hosting Operations, Legal); facilitated focus groups with Bob, Bill, and Christine; and a written questionnaire distributed to a sample of consultants for content needs. Existing site analytics and competitor reviews will supplement direct elicitation.

Analysis

Each elicited requirement is analyzed for clarity, feasibility, completeness, and alignment with the project charter. Conflicts between stakeholder needs are surfaced early and escalated to the sponsor when they cannot be reconciled by the PM. Requirements failing analysis are rejected or rewritten before they enter the documentation set.

Categories

Requirements are categorized as:

- **Business** – higher-level needs the website must address (e.g., grow F500 leads).
- **Stakeholder** – needs of specific groups (e.g., Marketing's content-edit workflow).
- **Functional** – what the system must do (e.g., RFP form submission).
- **Non-functional** – quality attributes (performance, accessibility, security).
- **Transition** – migration of content from the existing site, training for editors.
- **Project** – constraints on how the project is run (compliance, reporting cadence).

Documentation

Approved requirements are recorded in the Requirements Documentation form with: ID, requirement statement, stakeholder source, category, priority, acceptance criteria, test/verification method, and target phase or release. The PM owns the master document; the team has read access and may propose changes via change request.

Prioritization

Requirements are prioritized using MoSCoW (Must / Should / Could / Won't) by the sponsor with input from Marketing and the PM. Prioritization is set at the close of requirements definition and re-confirmed at each phase gate. Only Must and Should requirements are committed to the launch baseline.

REQUIREMENTS MANAGEMENT PLAN

Project Title:	Mary's Consulting – New Company Website	Date Prepared:	May 7, 2026

Metrics

The following metrics will be tracked to measure requirements quality:

- % of requirements with documented acceptance criteria (target: 100%)
- Requirements volatility (number of approved changes per month after baseline)
- % of requirements traced to test cases (target: 100% for Must/Should)
- Defects found in UAT traceable to ambiguous requirements (target: < 5% of total defects)

Traceability Structure

A Requirements Traceability Matrix (RTM) is maintained by the PM. Each requirement is traced to: business need, stakeholder, WBS work package, design element, test case, and ultimately a deliverable in the launched website. Forward and backward tracing is supported.

Tracking

Each requirement carries one of these statuses: Proposed, Approved, In Design, In Development, In Test, Verified, Deferred, Rejected. Status is updated weekly during the team's status meeting. The RTM is the single source of truth.

Reporting

Requirements status is reported in the weekly project status report under a 'Requirements Health' section: count by status, approved changes this period, top-3 risks tied to requirements. The full RTM is shared with the sponsor at each phase gate review.

Validation

Each requirement is validated by the requirement's stakeholder source after implementation through UAT or a structured demo. Acceptance is captured as a signed entry on the Formal Acceptance Form. Non-functional requirements (performance, accessibility) are validated through automated testing tools and a third-party WCAG audit before launch.

Configuration Management

Requirements are version-controlled. Once approved, any change requires a written change request that is logged, evaluated for impact (scope, schedule, cost, quality), approved or rejected by the sponsor (or PM, within authority limits), and applied to the baseline. The Change Log records every change with date, requestor, decision, and rationale.
